Data as a Place

The image depicts a 3D visualization of data as a place. At the bottom, a pinkish-purple ground plane features a grid of darker, irregular shapes. On top of this plane, a cluster of yellow and orange rectangular blocks of varying heights and sizes is arranged, resembling a city skyline or a data landscape. Above this ground plane, the blue background is filled with numerous floating rectangular elements in shades of yellow, orange, and red. These elements are scattered and oriented in various directions, some appearing as thin lines and others as larger, more prominent rectangles, suggesting a dynamic and multi-dimensional data environment.

Dropbox

Mac OS Finder window titled "Magazines" showing a file hierarchy. The window includes a sidebar with "Favorites" (iCloud Drive, vорг, Desktop, Applications, AirDrop, Documents, Downloads, Dropbox) and a main pane with a tree view of folders and files. The "Dropbox" folder is expanded, showing subfolders like "content", "vорг-pex-modules", etc. The "Magazines" folder is selected, showing subfolders for "2015-07" and "2015-08". The "2015-08" folder is expanded, showing subfolders like "Business", "Fx", "GPU", "IxD", "Magazines", "Mind", "Personal Dev", "Todo", and "UI". The "Magazines" folder is expanded, showing files: "ZQ_issue_03_final.pdf", "ZQ_issue_04_final.pdf" (selected), "ZQ_issue_0...final01.pdf", and "ZQ_issue_09_Final2.pdf". A status bar at the bottom indicates "1 of 4 selected, 2.99 GB available".

Naked Mole-rat Behaviour

Tango Dance Steps

Arthur Murray

What's the gender distribution?

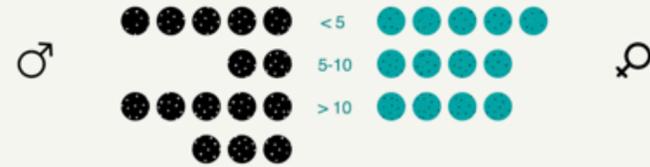

54% male vs 46% female

Fairly equal, a recent litter of pups contained all males.

Male / Female Distribution

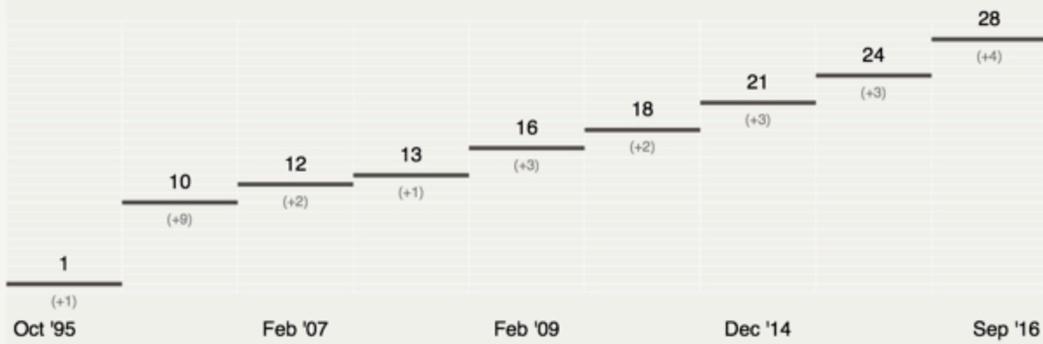

What is the age range?

The youngest is less than 12 months, the eldest is over 21 years old! Numbers above are in years. Blue dots represent females, black dots are males.

How do the generations evolve?

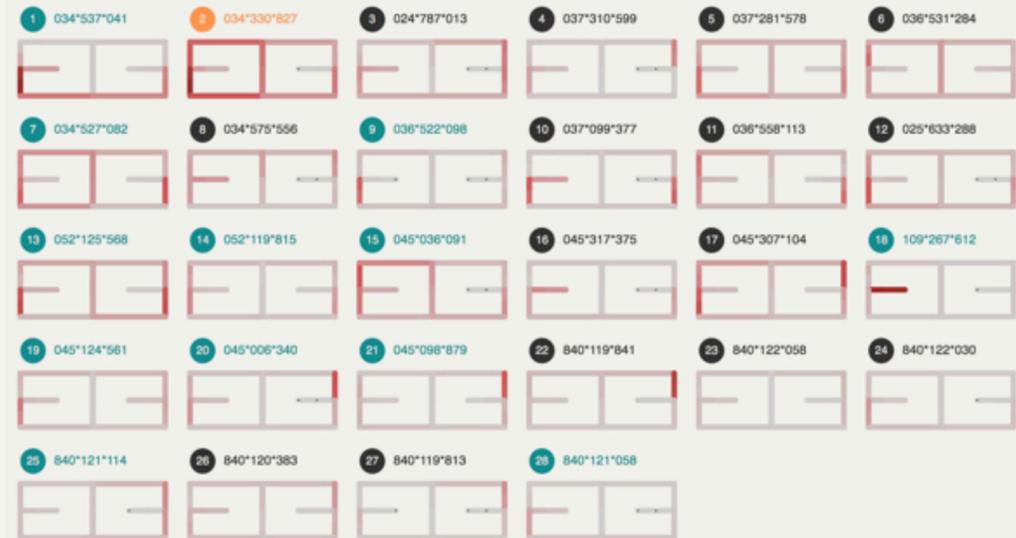

As far as we know, the record litter for a naked mole-rat colony is 27 pups! This graph shows the colony growth over time. Breeding began in 2006 when a Queen was introduced to a new community.

Do individuals have a regular route?

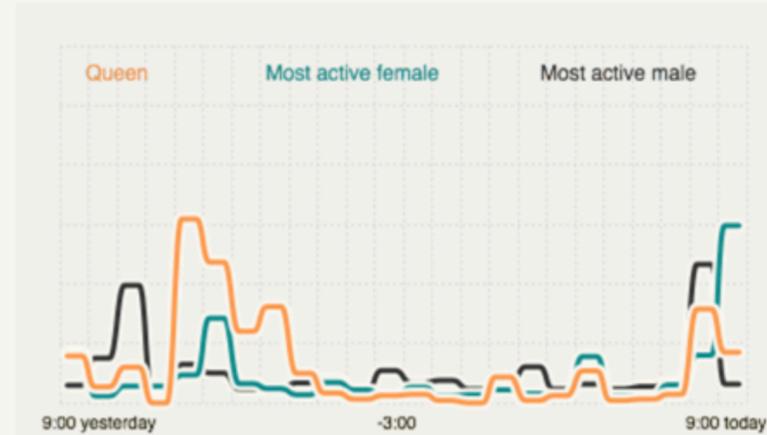

Rarely Often

These "heat" maps show the last 24 hours of activity for each animal. Where the lines are darkest it shows where that animal hangs out most often. The patterns are different as members of the community have different roles, some maybe defending a certain area. The queen is marked orange, males are black and females blue.

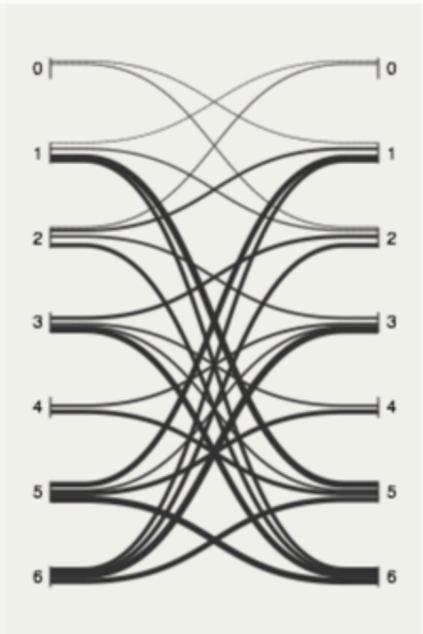

Which are the most active animals?

This plot shows activity over the past 24 hour period. Activity is based on how frequently animals pass the sensors around the burrow.

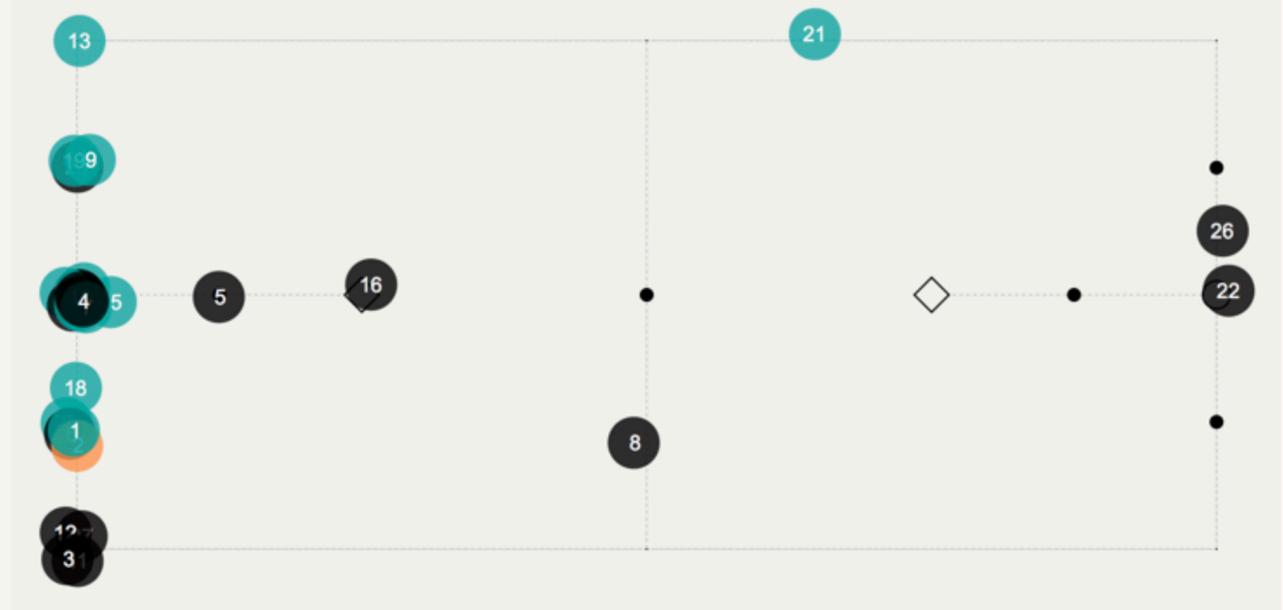

Most popular paths

This diagram shows which routes in the burrow are taken most often. For instance if route 4 to 5 is the thickest we know that the animals are visiting the toilet a lot!

Current naked mole-rat positions at 09:02 20 Apr 2017

This is a live data representation of the colony (updated every 5 min). The last known position of each animal is represented by a circle. The burrow we've drawn here is simplified, the real one is made of clear tubes with feeding, toilet and sleeping chambers.

Reciprocity of data

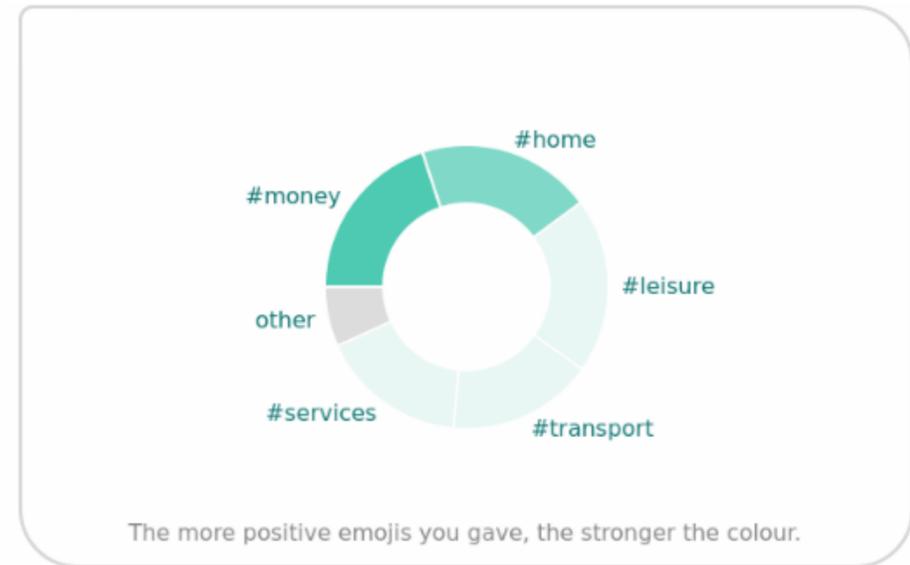

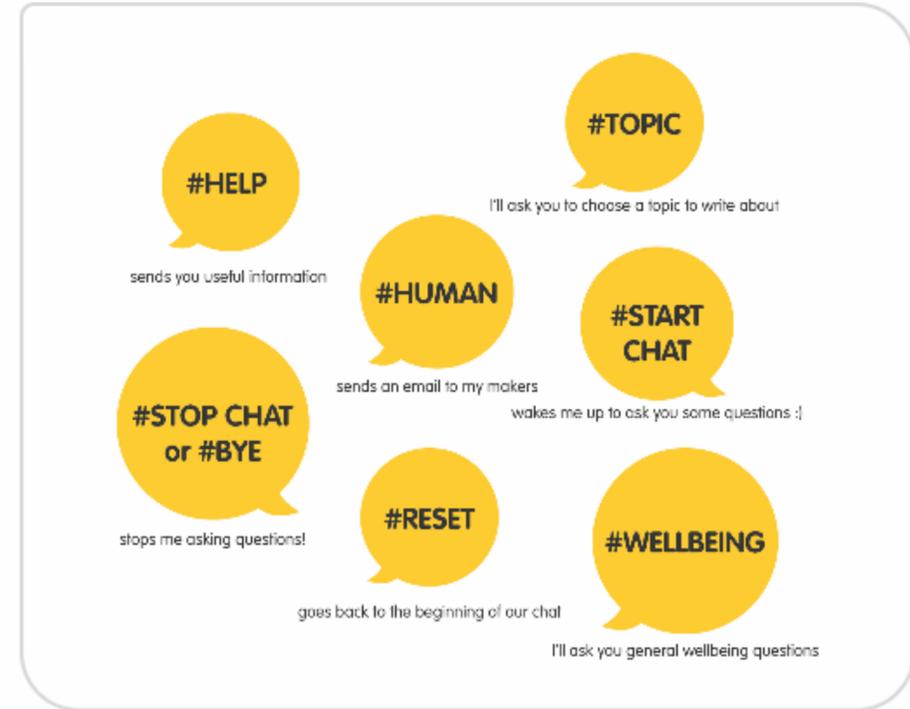

Hey Marcin! Hope you are having a nice day! Is this a good time for a chat? (if you want to chat later, it's OK to pick no now!)

yes

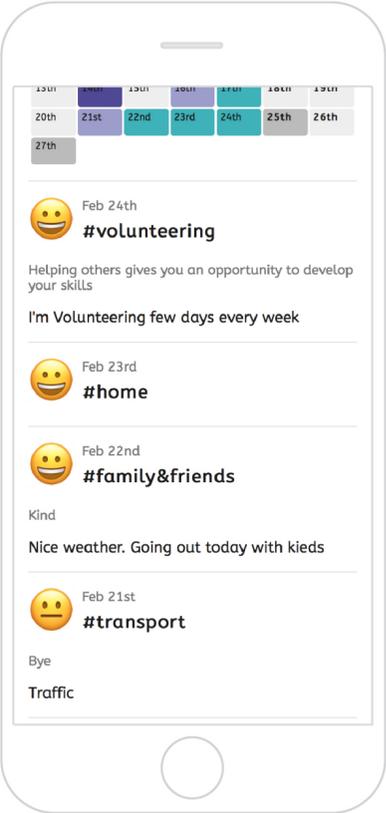

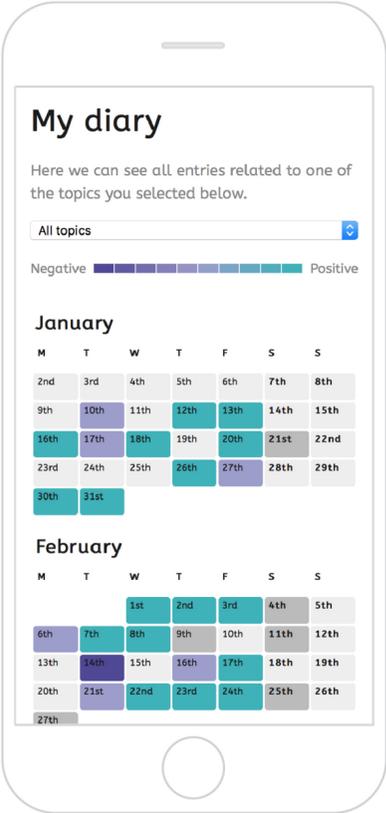

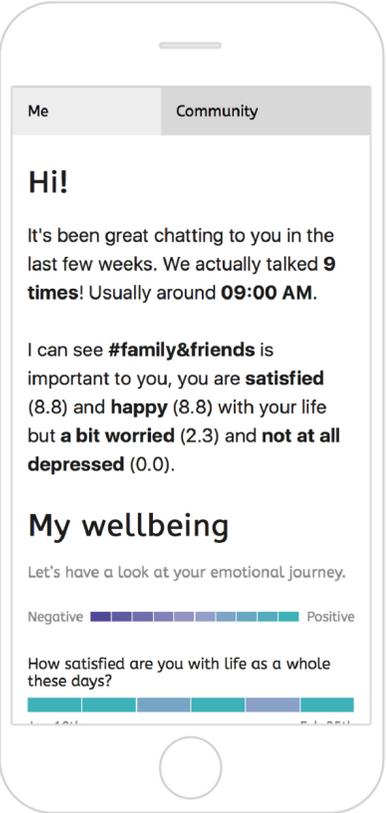

Thanks Marcin! Before we get started, how would you say you feel today overall? Please pick a number between 0 and 10, where 0 is terrible and 10 is amazing. #howareyoudoing
